Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sato et al (US 4,633,654) in view of Sandberg (US 4,308,710).

In regard to claims 1,2 and 4, Sato discloses the invention substantially as claimed including first and second clamshell portions 3 and 3', with a lip portion 7, which maintains the bag in an open position during evacuation, forming an airtight seal with seals 8 and supplying compressed air through line 6 to evacuate a bag (see Figs 3-5 and C2,L37 - C3,L41). What Sato does not disclose is a vacuum means to hold the bag neck open during evacuation. However, Sandberg teaches that it is old and well known in the art to provide a curved lip portion 52 with passages 49 that pull a vacuum to hold bag 43 open at the neck during a filling and sealing stage for the purpose of sealing and evacuating a bag without contaminating the surrounding environment (see Figs. 4, 5 and C4,L42-53). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the invention of Sato with the vacuum retention means as taught by Sandberg for the

purpose of sealing and evacuating a bag without contaminating the surrounding environment.

In regard to claim 3, Sato discloses the invention substantially as claimed including rotating axle (no number but generally near 13), swing arm in the form of driving arm 13 and first and second locking arms 10 (see Fig.2 and C2,L65 – C3,L4).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Johnson, Di Bernardo, Saylor, Ylvisaker et al, Natterer, Bullock et al and Carcano have been cited to show device having similar structure.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul Durand whose telephone number is 571-272-4459. The examiner can normally be reached on 0730-1800, Monday - Thursday.
